**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4-08-03 has been entered.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-2, and 4-9 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter -which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

3. Applicants have amended the instant claims to recite a step comprising "selecting a putative compound which is found to inhibit induction of Egr-1, decrease expression of Egr-1 or decrease the nuclear accumulation or activity of the Egr-1 gene product." Applicants refer to

Art Unit: 1635

page 18, lines 18, through page 19, line 17, as support for this amendment. However, the teachings of the specification as filed does not support Applicant's amendment because the antisense oligonucleotides disclosed in Table 1, page 18, were not previously known to inhibit induction of Egr-1, decrease expression of Egr-1 or decrease the nuclear accumulation or activity of the Egr-1 gene product, prior to assessing the ability of the "putative" compound to inhibit proliferation of cells. Moreover, the method disclosed in the specification as filed, page 19, lines 6-8, comprised assessing the ability of a control oligonucleotide, that would not be expected to inhibit Egr-1 expression, to inhibit smooth muscle cell proliferation. Applicant's amendment does not properly reflect the method disclosed in the specification as filed. Applicants must cancel the new matter in response to this Office action.
